

Hit Director Domains LLC

Google Ads API Integration — Design Document

1. Company Name

Hit Director Domains LLC • <https://hitdirector.com>

2. Business Model

Hit Director Domains LLC is a United States digital marketing company. We build and operate lead-generation websites for our own brands, and we manage Google Ads for a small number of client businesses that have authorized us to do so. All managed accounts are linked under our single manager (MCC) account. Our revenue comes from our own lead generation and from management fees. We advertise only for properties we own or client accounts explicitly linked to our MCC.

3. Tool Access / Use

This is an internal tool used only by Hit Director Domains LLC staff to manage the Google Ads accounts linked under our manager account (our own properties and authorized client accounts). It is not sold, offered, or exposed to any external party, and it has no public interface. It is operated by our internal team through our MCC.

4. Tool Design

The tool authenticates with a single OAuth refresh token tied to our manager account. It reads reporting data — campaign, ad group, keyword, and search-term performance metrics — across the accounts we manage and presents it in an internal dashboard we review to manage ad spend and improve return on ad spend. For campaign planning, it also queries the Keyword Planning service to retrieve keyword ideas, historical search volumes, and bid (CPC) estimates.

All write operations are user-initiated and limited to standard campaign management on the accounts we manage: creating and updating campaigns, ad groups, ads, and keywords, and adding negative keywords that an operator has explicitly approved. No account data leaves our environment, and nothing is resold or shared with third parties.

5. API Services Called

- **GoogleAdsService**.search / searchStream — reporting across campaign, ad_group, keyword, and search_term_view
- **CampaignService**, **AdGroupService**, **AdGroupAdService** — create and update campaigns, ad groups, and ads

- **CampaignCriterionService / AdGroupCriterionService** — keywords, negative keywords, geo targeting, and audiences
- **ConversionActionService** — create and read conversion actions
- **KeywordPlanIdeaService** — keyword ideas, historical search volumes, and CPC estimates for campaign planning

6. Tool Mockups

Internal reporting dashboard (wireframe):

Account / Campaign	Spend	Conv	Revenue	ROAS	Action
Own · Emergency Plumber	\$420	14	\$2,800	6.6x	Scale
Own · Blocked Drains	\$180	3	\$450	2.5x	Watch
Client A · Roofing	\$980	22	\$6,050	6.2x	Scale
Client B · HVAC	\$610	9	\$1,900	3.1x	Review

Recommendations panel (below the table) surfaces operator-approved actions, e.g. add negative search terms, or raise budget on high-ROAS campaigns.
